

# *Rheum undulatum* Pall.

WHO

WHO

**Mongolian name**

**Dolgiotson Gishuune**

**Tibetan name**

**Jumza**

**English name**

**Bucharian Rhubarb**

**Synonym:** *R. rhabarbarum* L. [1]

**Description:** Ca. 2 m tall perennials, with dark brown roots and hollow thick stems. Radical leaf blades long triangular, densely villous, with tapered apex, cordate base, pinnate veins, strongly undulate margins, petioles fleshy and juicy. Cauline leaves smaller, a few, with large ochreas. Whorled white flowers with long peduncles form panicle. Nutlets 8–10 mm long, triangular, dark brown, glossy, with narrow light brown wings.

**Distribution:** Khent., Khang., Mong-Dag., Dund. Khalkh, Dor. Gobi.
