

Paeonia anomala L.

WHO

WHO

Mongolian name

Yagaan Tseene,
Yalguuntsetseg

Tibetan name

Bavru

English name

Ural Peony

Synonyms: *P. laciniata* Pall., *P. sibirica* Pall. [1].

Description: 40–80 cm tall, glabrous perennial herbs, with thick tuberous roots. Basal leaves scale-like, cauline leaves ternate with twice palmate segments or pinnately segmented with long lanceolate lobes. Terminal leaves entire, with 2–3 teeth. Lower surface of the leaves glabrous, upper surface slightly hairy along the veins. Corolla red, 8–18 cm in diameter. Follicles 3–4, transversely arranged, with numerous black seeds.
