Dagsha

English name

Dense leaf Crazyweed

Synonyms: *Astragalus myriophyllus* (Pall.) Pall., *A. verticillaris* L. [1].

Description: Acaulis perennials, forming dense bush, with grey hairs. Leaves long, but 1.5 times shorter than scape, pinnately compound, fringe-like, 20–30 regularly arranged verticils in a leaf, 6–8 leaflets in a verticil, leaflets longitudinally rolled up, slightly bent, with sparse whitish hairs. Flowers 20 mm long, whitish violet, sometimes white, in oblong sparse raceme. Calyx 8–12 mm long, tube-like, with sparse long hairs, limbs 2–4 mm long, awl-shaped or narrow-lanceolate, two to three times shorter than tube. Beak of the keel 1.5–2 mm long,
