WHO

Mongolian name

Manj gandigar

Tibetan name

Ganda gari

English name

Manchurian Elder

Description: Shrub 1–4 m tall, branched from the base, with sparse hairs and violet-brown branches, their pith soft, spongy, light brown. Leaflets 5–6, in 2–3 pairs, lanceolate or broad lanceolate, 5–9 cm long, with round or sometimes cuneate, slightly cordate base, acuminate apex, serrate-dentate margins. Inflorescence dense, ovate or broad ovate, corymbose, glabrous or sometimes papillose. Corolla yellowish or green. Stamens widely open. Berries bright red, 4 mm in diameter, with three narrow oval seeds.

Distribution: Khent., Khang., Mong-Dag., Khyang.
